SUMMARY

Senior Flutter Engineer with 6+ years shipping production mobile products at scale. Deep expertise in performance optimization, offline-first architecture, and modular codebases serving **5M+ users**. Proven track record of reducing cold start by **35%**, achieving **99.9% crash-free rates**, and architecting systems with **50+ feature modules**. Open-source contributor with **315+ GitHub stars** and packages adopted by **5,000+ developers**.

SKILLS

Mobile: Flutter, Dart, Android, iOS

Architecture & Data: Clean Architecture, MVVM, BLoC, Dependency Injection (DI), SOLID, PowerSync, Drift

DevOps & Quality: CI/CD, GitHub Actions, Codemagic, Firebase, Sentry, Integration Testing, REST, GraphQL

Leadership: Architecture Ownership, RFCs, Release Governance, Code Review, Hiring, Mentoring

EXPERIENCE

Lead Mobile Engineer

Jul 2025 – Present

iStoria · Riyadh, Saudi Arabia (Hybrid)

Stack: Flutter, Dart, PowerSync, Drift, Firebase, Sentry, GitHub Actions, GraphQL, REST

- Led a 4-engineer mobile squad, owning architecture decisions, hiring bar, release governance, and delivery timelines across iOS and Android.
- Reduced release cycle from 4 weeks to 1 week via trunk-based development, feature flags, and end-to-end CI/CD ownership (Codemagic, GitHub Actions, store releases).
- Architected modular Flutter codebase with **50+ feature modules** and 140+ routes applying SOLID and MVVM, documented via RFCs and enforced through CI quality gates and code review.
- Negotiated quarterly mobile roadmaps with Product, Design, and QA, balancing feature velocity against tech debt for **5M+ users**.

Founding Mobile Engineer

Jan 2022 – Jul 2025

iStoria · Riyadh, Saudi Arabia (Hybrid)

Stack: Flutter, Dart, PowerSync, Drift, Codemagic, Firebase, Sentry, Adjust, REST, GraphQL

- Achieved **99.9% crash-free rate** via crash budgets, systematic profiling, and CI quality gates blocking releases below stability thresholds.
- Designed offline-first infrastructure (PowerSync + Drift) with sync conflict resolution, schema migration, and data integrity guarantees for millions of users.
- Drove a sustained performance program: **~35% cold-start reduction** (parallelized service providers, deferred post-first-frame SDKs, 35+ eager → lazy dependencies); **~60% rendering gains** (RepaintBoundary isolation, background JSON deserialization); **~20% memory reduction** (eliminating controller/stream leaks).
- Maintained end-to-end stability across **mobile, backend, and cloud** as the **sole engineer for 1.5M users** during a team transition, coordinating with Product to prioritize critical fixes.
- Maintained **8+ custom/forked Flutter packages**, contributing fixes upstream and owning long-term maintenance to meet production reliability requirements.
- Integrated 4 marketing SDKs ([WebEngage](#), [MoEngage](#), [CleverTap](#), [Adjust](#)) and built A/B testing infrastructure (Firebase Remote Config + [GrowthBook](#)), enabling data-driven feature rollouts and personalized engagement.

Mobile Engineer

Oct 2020 – Jan 2022

Happy Trip · Cairo, Egypt

Stack: Flutter, Dart, REST, Firebase

- Owned mobile delivery end-to-end across the Flutter team — task planning, code review gates, and sprint execution — setting the cadence for every release during the platform's first 14 months.
- Architected a networking SDK with multi-layer caching, request queueing, auto-retry, token refresh, and background parsing, **cutting networking code by 60%**.
- Designed and delivered the company's first mobile platform (consumer booking, internal HR, POS) in 14 months, enabling a full business pivot from traditional tourism to a tech-enabled service.

Mobile Engineer (Part-time)

Feb 2021 – Oct 2021

Tech Bay Portal · UAE (Remote)

Stack: Flutter, Dart, Socket.io, Google Maps

- Delivered real-time GPS tracking and live trip updates (Socket.io, Google Maps) for a ride-hailing platform.
- Collaborated within a distributed multinational agile team, coordinating asynchronously across time zones alongside a concurrent full-time role.

- Led company-wide Flutter adoption as the first Flutter engineer, mentoring the Android team through advanced patterns (Streams, RxDart, DI) and authoring the shared coding standards the team still uses.
- Shipped production e-commerce and document management apps with barcode scanning and file encryption.

PROJECTS

[flutter_cached_pdfview](#) — Cross-platform Flutter PDF viewer (iOS/Android) with URL/asset/local caching, password-protected PDFs, and gesture-based zoom; **134*** on [GitHub](#), **500+** likes on [pub.dev](#), **43k+** downloads.

[flutter_zoom_checker](#) — iOS/Android display-zoom (UI scaling) detection plugin, working around a Flutter framework limitation ([issue #95421](#)).

[dio_firebase_performance_plus](#) — Dio interceptor streaming HTTP request metrics to Firebase Performance Monitoring.

[clipboard_plus](#) — Flutter clipboard plugin with **silent content-type detection on iOS** (UIPasteboard) — detects URLs, text, and images without triggering the iOS paste permission dialog.

[Stickerawy](#) — WhatsApp stickers Android app with **500K+** installs on Google Play.

Open-source contributions: patches and fixes to [youtube_explode_dart](#), [dio_smart_retry](#), and [growthbook-flutter](#).

EDUCATION

Bachelor of Management Information Systems

Ain Shams Academy, Cairo, Egypt
